About Us

Since 2009, Boer Technology (Btech) has committed to customers from various industries in Indonesia to continue providing the best services and solutions by using Open Source Software as a tool to create an environmentally friendly company. Supported by reliable human resources, we are now focusing on Cloud, DevOps, Security, and Tech Professional Delivery to realize an efficient and secure company and make a business run faster.

Built from IT communities for the broader IT ecosystem, Btech has solid relationships and interactions with communities that has the same vision because we believe that we do things better together.

Expertise

CloudSecOps

CloudSecOps is an evolution of SecOps that focuses on building controls, implementing monitoring and enacting security response activities in cloud environments.

DevSecOps

DevSecOps is the practice of integrating security testing at every stage of the software development process.

Our Solutions

Cloud Strategic Plan

Our certified experts provide excellent professional services in the form of discussions to produce a documented strategic plan and make it measurable and well-planned. We are ready to provide solutions based on best practices for your company's needs.

Example Case:

Public to Private Cloud Migration
IaaS Private Cloud Deployment
Container Orchestration Deployment

Output:

Recommendation Report

DevSecOps Transformation Support

We offer one integrated service for better effectiveness and efficiency of your needs. Analysis, implementation, and maintenance are carried out and provided optimally by our certified experts.

Example Case:

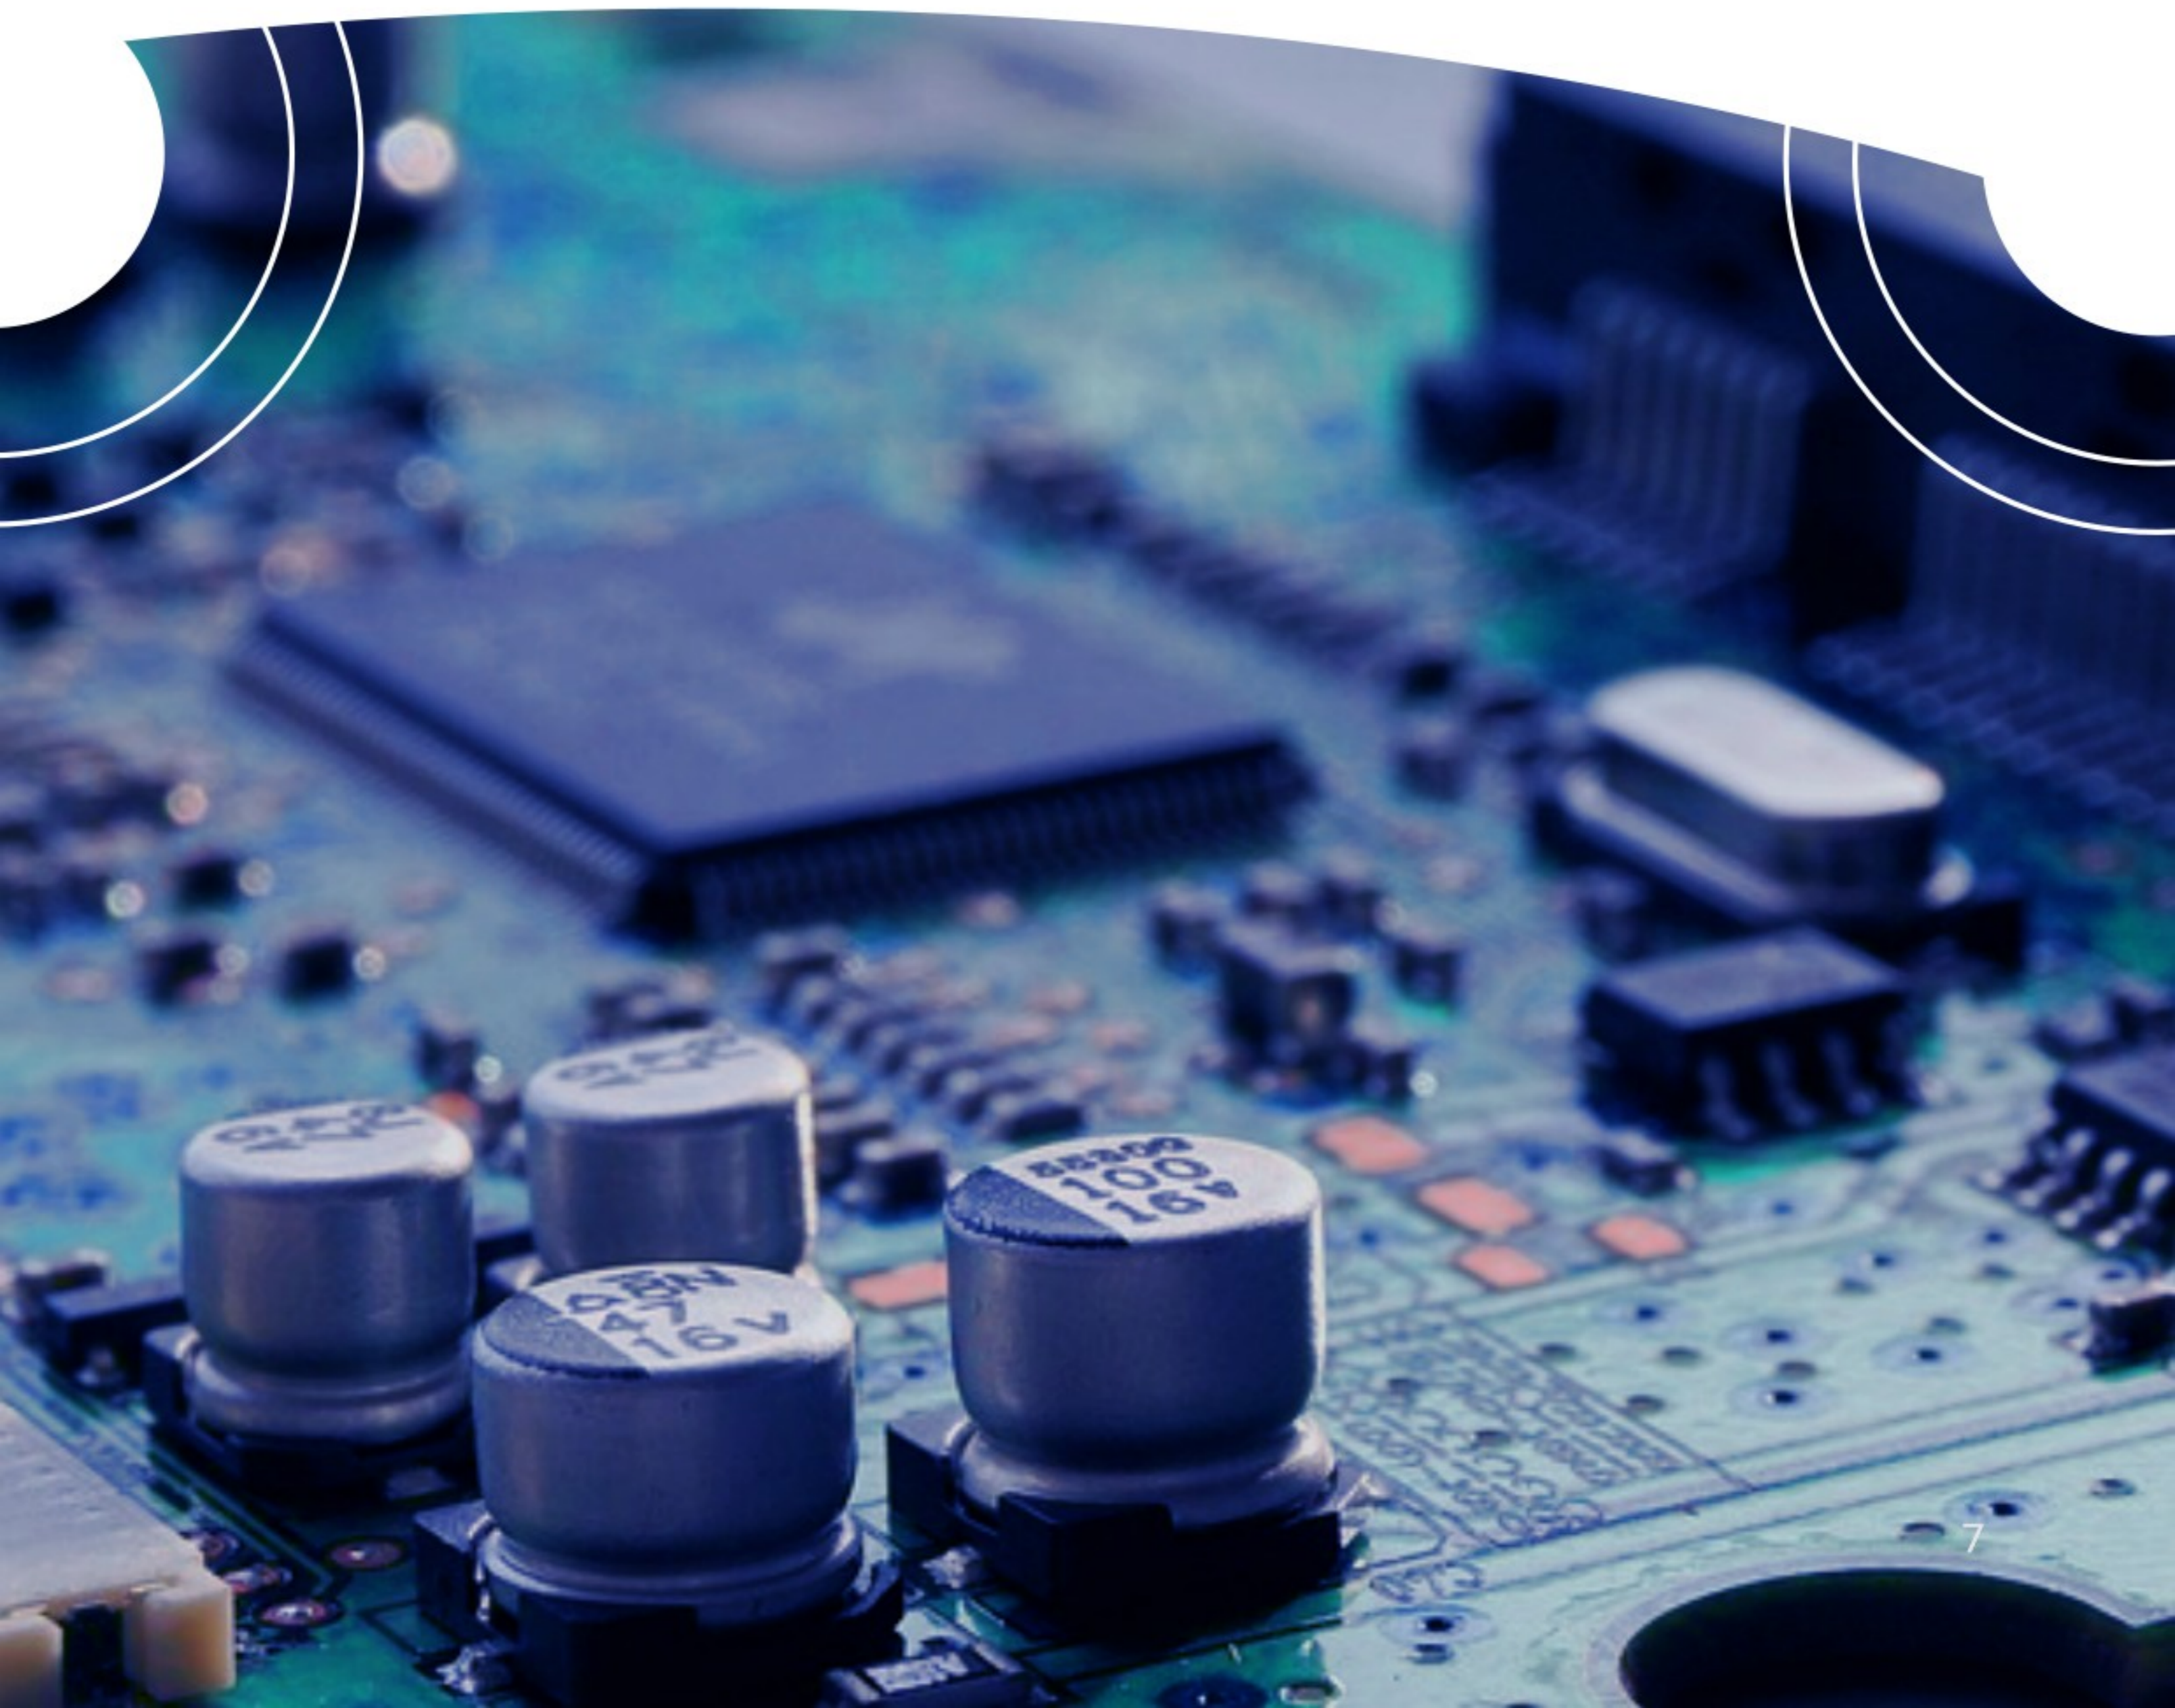

DevOps CI/CD Adoption
DevSecOps Adoption

Practical HCI Solution

Get ready to change the pace of your business with us. Implementation recommendations for small to the medium-sized infrastructure provided by our certified expert to get started for optimizing integration and automation.

Example Case:

OpenStack HyperConverged Infrastructure Deployment

Cloud DRC with Z Converter

The bottom line of realizing a healthy infrastructure environment is ensuring it is safe and secure. Consider systematically handling your infrastructure to avoid data loss and damages using ZConverter.

Example Case:

- Cloud Data Recovery
- Cloud Migration
- OS and Data Protection

Btech Cloud Care

Entrust the handling of your cloud infrastructure maintenance, prevention, and repair with us. We commit to providing the best services and helping your business work correctly.

Btech Cloud Care Comparison

	Plus	Max
Scope	<ul style="list-style-type: none"> - Maintain & Troubleshoot Host OS (Ubuntu), OpenStack, Ceph Storage, Kubernetes. - Troubleshoot by ticket system - Level layer support (L2, TL, Adhoc/ Architect/Principal) - The Team full remote 	<ul style="list-style-type: none"> - All Maintenance Support scope on Cloud and Clusters - Monitoring support, Include day to day operations activity - Level layer support (L0, L1, L2, TL, Adhoc/Architech/Principal) - The Team remote/on-site
